**DETAILED ACTION**

***Election/Restrictions***

---

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- A. Figs. 1 and 2, drawn to a suspension with a rotary arm, an eccentric connection and a torsion spring.
- B. Figs. 3 and 6, drawn to a suspension with a rotary, and eccentric connection and a lever/coil spring arrangement.
- C. Fig. 4, drawn to a suspension with two rotary arms, eccentric connections and a U-shaped torsion spring.
- D. Fig. 5, drawn to a suspension with a rotary arm, an eccentric and a torsion spring and having a side connection of the arm to the spring.
- E. Fig. 7, drawn to a suspension with a leaf spring and eccentric connection.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply

must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 2-4 relate to Species A and B.

Claim 5 relates to Species C.

Claims 6-9 relates to Species D.

Claim 10 relates to Species E.

The following claim(s) are generic: 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Each Species differs in its' mounting or assembled arrangement. The inclusion of an eccentric connection in a vehicle suspension arrangement is not a new inventive concept and therefore, the mounting or assembled arrangements described in Species A-E as described above are considered different inventive concepts.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George D. Spisich whose telephone number is (703) 305-6495. The examiner can normally be reached on Monday to Friday 6:00-3:30 except alternate Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Dickson can be reached on (703) 308-2089. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
